Cable Management Hub

November, 2009

In today's technology-driven world, it is easy for the maze of cables on your desk from either your laptop or desktop application to become both unsightly and dangerous. Our Cable Management Hub solves this by providing a stylish and accessible home for cables, that can be installed anywhere on your desk without marring it. The access door opens to just past vertical, where it remains while you simply pull the jacks out when needed. Closing the access door hides all jacks when they are not in use. Simplify the task of locating and attaching jacks for your laptop, desktop, or peripherals with the Cable Management Hub.

Advantages and Specifications

- A magnetic catch keeps the door closed, even if mounted inverted on the underside of a desk.
- Jacks are hidden when not needed and are easily accessible when required.
- Five strain relief protected holes ensure that your cables are protected yet prevented from escaping, while a gap under the door's front & rear edge allows cables to exit.
- A 120 volt outlet can be added by securing the female end of an extension cord.
- Mounts anywhere without defacing your desk.
- 6" wide x 4" deep x 1 1/2" high.
- The hub is finished in black textured paint.

Installation

- The Cable Management Hub can be mounted anywhere on, or even under your desk.
- Mounting it near the edge of your desk that runs along a wall allows excess cables to drop out of sight.
- For easy cable access and a free work surface, you can mount it vertically on the inside of a desk leg or inverted and attached to the desk's underside.
- Does not require any holes to be made in your desk; a mounting plate with integral studs is attached to the desk using double-sided tape.
- The hub's integral slots are then slid over the studs and secured with the two included fastening nuts.
