Copper Trellis

May, 2009

This modular garden trellis can be configured to almost any height, width and layout, with the added advantage of being made of solid copper tubing. The copper will develop a beautiful verdigris patina over time.

The basic kit contains two pairs of joining uprights, two horizontal members, two support cups and two decorative leaf caps, forming a 48" high by 18" wide trellis. Optional kits are offered (as described in the table below) to increase the height in 24" increments and/or width in 18" increments, allowing you to design a straight line, zigzag, a closed shape trellis, or any other layout to meet your exacting garden needs.

Once in place, the 5/8" tubes provide a stable and secure support for climbing plants, while providing a decorative touch to your garden. These tubes are made even more stable when the lowermost uprights are placed within the 3" dia. galvanized steel support cups that are simply pressed into ground and covered up with earth. If desired, intermediate supports can be added for climbing plants by wrapping bare copper wire (or cord) around the horizontal members. With its decorative copper leaf caps, Tripar's Copper Trellis creates a simple and elegant addition to your garden.

Item #	Description	Included in kits
CP0901	Basic Kit (48" high x 18" wide)	4 x 24" vertical tubes, 2 x 18" horizontal tubes, 2 leaf caps, 2 support cups
