

New Product Bulletin – MR16/GU10 Trim & Reflectors

January, 2003

We are pleased to offer a new series of baffles and reflectors with mating trims for MR16 & GU10 downlights.

The low profile 5" diameter trims accept either our new baffle (part # 1290), or reflector (part # 1291). With both parts being separate from the trim (part # 1292), they can be plated (or painted) the same or in a different finish (or color) for contrast. Once finished, three push-in tabs hold the two together.

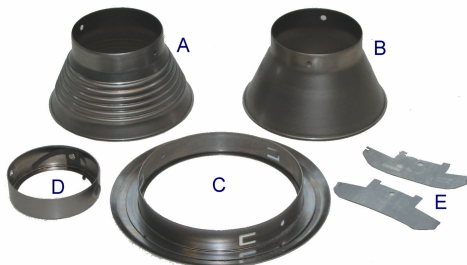

The flange on the trim is sized to fit into the following recessed housings:

Item # series	Dia.	Height
1210	4"	4-1/2"
1218	4"	5-1/2"
1250	4-3/16"	4-1/2"

Trim to housing retention is achieved with a pair of our new recessed trim springs* (part # 0047), featured in our September 2002 New Product Bulletin (or see the *Archives* in the *What's New* section of our web site home page).

Bulbs are secured within our MR16/GU10 gimbal (part # 1148S-11), which is free to pivot once riveted within the neck.

The trim contains a slight bevel around the periphery, ensuring intimate contact with the ceiling, but otherwise offering a near flush mount.

	Item	Description
A	1290	Baffle
B	1291	Reflector
C	1292	Trim
D	1148S-11	MR16/GU10 Gimbal
E	0047	Trim Spring*

All parts are made in dedicated tooling for the most competitive pricing.
