
New Product Bulletin – Xylophone Bars

May, 2007

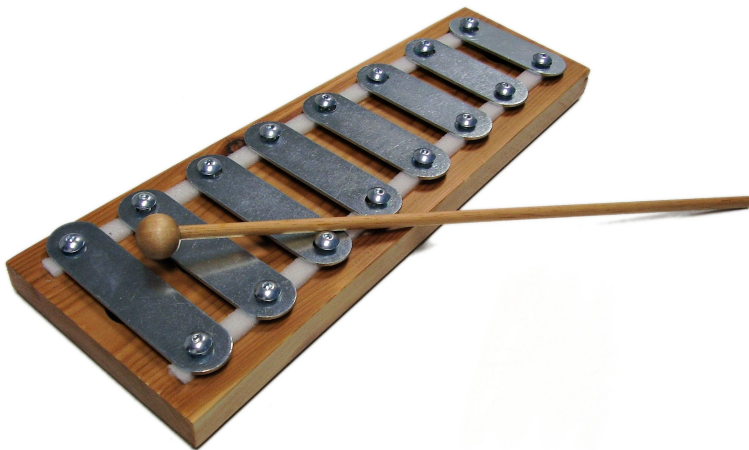

Making a xylophone is one of the simplest woodworking projects...if you have the bars. Enter our xylophone bars containing a full octave, with each bar tuned to the required pitch, producing a pleasant musical scale.

Whether you are a grandparent or parent making the xylophone for your youngster, or looking for a simple project to help initiate your aspiring percussionist to the loves of both music and woodworking, nothing could be more ideal.

Xylophone Bars, CP0201
(Wood and hardware not included)

The xylophone can be as simple as a plank of wood with the bars evenly spaced and supported with soft foam or felt. Taper the plank for a more purposeful look, or use slender bars of exotic wood for added pizzazz.

The eight bars are made from .075" thick x 1" wide steel, deburred for complete safety, and zinc plated to keep them looking shiny for years to come.

Complete, albeit simple instructions included.

All items are made in progressive dies for the most competitive pricing.
