## Cable Management Box

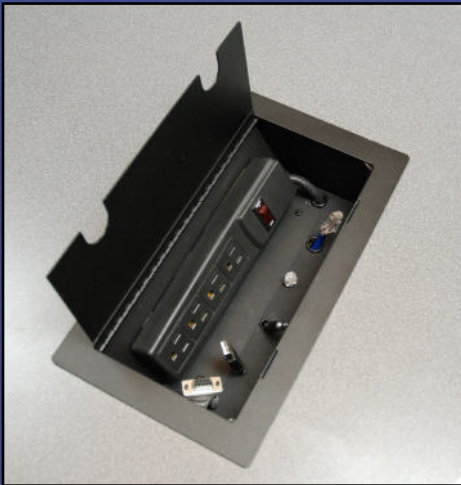

September, 2009

In today's technocentric world, the maze of cables connected to your computer, particularly at a conference table, can become not only unsightly, but dangerous as well. Our Cable Management Box solves this by providing a home for a power bar containing up to four grounded outlets, plus six strain relief protected holes to allow passage of various power and communication cables (RJ11, RJ45, VGA, phone, etc.). These cables are all neatly contained in a formed, textured black powder-painted metal box that is recessed into your table, with only a hinged door and a surrounding 1" frame showing when closed.

### Advantages

- Access to the power bar is maximized as the rear of the box cavity is tilted and the large 4 1/2" x 10" door opens to just past 90 degrees.
- All installed cables are prevented from escaping when the retaining plate is attached.
- Permits easy retrieval of any cable that is not in use as they can be fed down through the bushing until only the jack is exposed.
- Cables can be coiled up and stored within the box.
- Two 1" wide cutouts in the door allow ample finger access for opening the door, as well as passage for tabletop equipment cables when the door is closed.
- The rear of the box cavity is slotted to hold a variety of power bars, should you wish to provide your own\*.

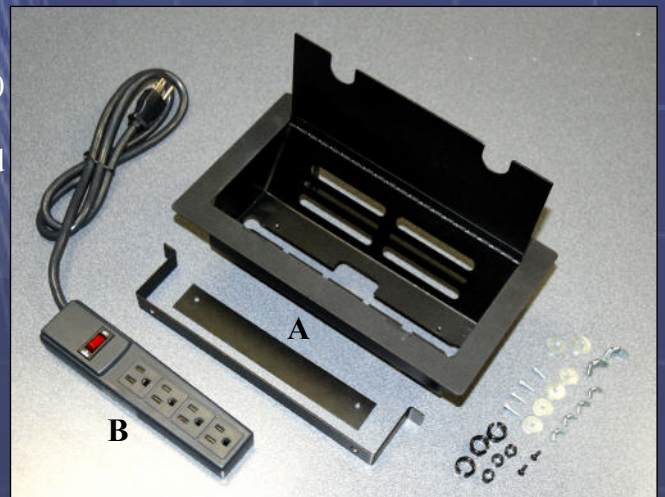

### Specifications and installation

- Can be installed in tables up to 1 1/2" thick by making a 5 5/8" x 10 1/2" cut-out.
- The 2 3/4" x 4 1/2" x 10" box is placed into the cut-out and secured from below using the included hardware.

	Item #	Description
A	CP2001BL	Cable Management Box (power bar not included)
B	PP237	Power Bar, with 4 surge protected outlets **

\*Maximum power bar dimensions are 9" long x 2" wide x 1 1/4" tall. Must contain at least two keyhole slots on the rear for mounting.

\*\* CSA/UL approved.
