

HOME LIGHTING & ACCESSORIES

EDITED FOR THE MANUFACTURERS OF
DECORATIVE LIGHTING AND ACCESSORIES

These patent-pending bar hangers from Montreal-based Tripar Inc. encompass the best features of existing bar hangers plus offer innovations to aid in installation. The hanger design provides mechanical interference that prevents the hangers from slipping apart during placement, yet can be separated with a solid tug. Small outward extending taps help to position the fixture flush with the underside of joists. Integral nails are located far away from the main bar for easy nailing and are oriented parallel to the joist grain for easier installation. The nails are also retracted and surrounded for added safety.

The bar hangers contain slots for engagement with suspended ceiling T-bars, and the depth permits the plaster frame to sit flush with the underside of the ceiling panels. The bars extend to accommodate joist spacing from 14 to 24 inches.
