Wiring connections can be simple with the Extender Box and 3-D Junction Box Cover from Montreal-based **Tripair®**.

The stackable Extender Box quickly snaps to the Model #1232 and #1247 junction boxes to double their volume. Dealers and distributors can reduce inventory of dedicated larger boxes because the extender permits a fixed model to grow as needed.

The 3-D Cover (Model #1242-XXB) offers unrestricted wiring access with two $\frac{3}{16}$ -inch and two notched $\frac{1}{16}$ -inch thermal knockout holes on the 1"-high side faces, permitting power and other feeds to be brought into the cover. As an added benefit, the face clears the retention spring to accommodate larger ballasts, which can extend beyond all edges of the cover.
