

## New Product Bulletin - COMBAR; Tripar's Commercial Bar Hanger Solution

### Engineered solution for maximum strength and minimum expense

Listening to customer feedback and leveraging our lighting expertise, Tripar is proud to introduce COMBAR; our Commercial Bar Hanger Solution. Using our standard parts, but in a new formation, commercial bar hanger performance is now available without the bulk and cost of traditional commercial bar hangers.

To achieve this, additional support holes have been added to the sides of our diverse line of plaster frames, permitting installation of **two** of our sliding brackets (#1253) per side as opposed to the usual central one as shown below. When coupled with either our butterfly (#1254) or caterpillar (#1054) brackets, this two-point support increases stability and reduces deflection, increasing the weight capacity by up to 300%.

Traditional bar hanger system

COMBAR

The beauty of our COMBAR is the following;

- It uses stocked Tripar components which benefit from competitive prices and short lead times.
- It allows design flexibility; a simple add-on is all that is required for heavier fixtures, eliminating the need to redesign to incorporate traditional commercial bar hangers.
- Retains the enhanced features of our #1254 & #1054 Brackets

Description	Traditional Bar Hanger Solution	COMBAR
Components required	2 x 1253	4 x 1253
	2 x 1254	4 x 1254
	2 x 1287	2 x 1287
